January, 4th 2014

Student in third year at the Private School of Computer Science (EPSI) situated in Arras, I am strongly interested in a four-months internship - from 16th June to 4th October - in your company, which has to be oriented in software development.

EPSI has allowed me to recognize my capacity to listen to others and my ability to convince people. These skills were already tested during my High school diploma (Sciences), received with honors and European mention in 2011. President of a web oriented organization, these skills have been proved useful throughout my professional projects. Moreover, trips in Great Britain helped me to improve my vocabulary in foreign languages in order to reach a good level.

I wish to have a career in which my skills and my varied experience can be very profitable. « Search, explain, inform » is the motto of a good and efficient work, which I am trying to follow every day and which I will apply to your team. This internship will give me the perfect opportunity to help your business and develop my technical and interpersonal skills.

Thank you for taking time to consider this application and I look forward for hearing from you in the near future.

Yours sincerely,

Baptiste LECOCQ
