January, 4th 2014

As a student in third year at the Private School of Computer Science (EPSI) situated in Arras FR, I am very interested in a four-months internship - from 16th June to 4th October - in your company in web/mobile development.

EPSI has allowed me to recognize my capacity to listen to others and my ability to convince people. These skills have been already tested during my High school diploma (Sciences), received with honors and European mention in 2011. Being the president of a web oriented association, these skills have proven useful throughout my professional projects. Moreover, trips to Great Britain has helped me to improve my vocabulary in foreign languages in order to reach a good level.

I wish to follow a career in which my skills and my varied experience can create opportunities. « Search, explain, inform » is the motto of a good and efficient worker, which I try to follow every day and which I would apply to your team. This internship would give me the perfect opportunity to help your business and develop my technical and interpersonal skills.

You can see more about me and my projects in my website: tiste.io

Thank you for taking time to consider this application and I look forward for hearing from you in the near future.

Yours sincerely,

Baptiste LECOCQ
